

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

vent to their faint calls, which sound more like the chirping of insects than the calls of frogs.

RICHARD F. DECKERT,  
*New York, N. Y.*

### ON A YOUNG BLACK ANGEL FISH.

A *Pomacanthus arcuatus*, 3 or 4 inches long, taken near San Antonio Bridge, Porto Rico, last July, in a biological survey of that island which is being forwarded by the N. Y. Academy of Sciences and the Insular Government, had bright yellow, instead of whitish, cross bands. Yellow bands are then, not diagnostic of *paru*, perhaps they are ordinarily yellow in sufficiently small *arcuatus*.

J. T. NICHOLS,
